

PP. 2402 fa.

Vox Stellarum:
OR, A LOYAL
ALMANACK,
For the Year of HUMAN REDEMPTION,
MDCCXCI.

BEING

The Third after BISSEXTILE, or LEAP-YEAR

IN WHICH ARE CONTAINED

All THINGS fitting for such a WORK as,

A general Introduction and Prognostication,
RULES for predicting Changes of the Weather by the
Barometer;

A TABLE of Terms and their Returns;

The Full, Changes, and Quarters of the Moon;

The Rising, Southing, and Setting of the SEVEN STARS,
and other Fixed Stars of Note.

The Rising and Setting of the Sun; the Rising, Southing,
and Setting of the Moon; Mutual Aspects, Monthly Ob-
servations; and many other Things useful and profitable

UNTO WHICH ARE ADDED,

A remarkable CHRONOLOGICAL Table of the Holidays,
Astrological Observations on the Quarters of the Year;

And other MATTERS, both curious and profitable,

For the Use and Benefit of all Men, and particularly for
those that are Lovers of the Science of Astrology.

By FRANCIS MOORE, Physician.

ETIAM MORTUUS LOQUITUR.

BIRMINGHAM,

Printed and Sold by THOMAS PEARSON,
AT THE WHOLESALE ALMANACK, STATIONARY, AND MEDICINE
WAREHOUSE, IN THE HIGH-STREET.
And Sold by all Booksellers in England.

(.)
M O O R E, 1791.

WORTHY CUSTOMERS,

YOUR old Friend is most highly gratified by the increasing Sale, which the *True MOORE's ALMANACK*, printed by Mr. Pearson, of Birmingham, every year experiences. It affords him the most real satisfaction, to be thus convinced, that the labours of himself and his associates have not been in vain. To gain the general favour they have strove, and now they have earned it; in spite of the opposition, and many artifices (against which they must this year particularly caution their friends) employed by the agents of a body of men, who ought to be above acting in such a manner. We, however, regard them not, knowing full well our sincere endeavours to admonish and inform our friends, the genuine well digested intelligence, and rational prognostication of our Almanack, must gain it universal preference with all well disposed and sensible people.

In reviewing, my friends, the important events of the year 1790; how clearly do we discern in them the work of the finger of the MOST HIGH, *who rules in the kingdoms of men, and in whose hands are the hearts of all men*; and the great conformity of these events to the prophecies of the New Testament. Revelation tells us, Babylon (that is popery) the mother of harlots, and abominations of the earth, shall fall; and she is rapidly falling. One of the last of the great and rich kingdoms of her dominion, have withdrawn themselves from her support. By a decree of the National Assembly of France, no more *Peter's pence*, no more money is to be sent to, nor justly acknowledged of the Pope of

of Rome. • Thus deprived of a great revenue, and troubled by his subjects at home, the mighty Pontiff, who made kings hold the stirrup of his saddle, and kiss his toe, and who disposed of thrones, is now become more an object of pity than of dread. The last blow is being given to popery; Babylon shall *wholly* fall, the beast and the false prophet shall be cast into the bottomless pit, and all nations shall cry out, *Babylon, she is fallen, is fallen* (Revelation, chap. 18.) When this shall be accomplished, we may expect the gradually melting of all sects of Christians into one, the conversion of the Jew and the Heathen, and the establishment of that *kingdom of Christ* (in spite of the utmost endeavours of satan to hinder it) *when all people, nations, and languages, shall serve the SON of man, to whom dominion shall be given by the ANCIENT OF DAYS* (Daniel ch. vii. ver. 13.) How nearly we are approached to this great kingdom of sovereign peace, it is not in mortals to tell; this only can we presume to know and to predict, that we must be yet at a distance from it. For the *signs of the times*, denote instead of peace and good-will) war and internal commotions in kingdoms. Impiety, crimes, and excesses of every kind prevail. In the pride of human wit, and wickedness, men forget and insult their Creator, and nations frown hostilely at each other. Its share of troubles, Britain has had, and perhaps must again have; but that we may not be deemed unworthy of entreating the Divine mercy to avert the evils that threaten us, let each endeavour to obtain peace and happiness, as well for his country, as himself, by the virtue of his particular life. Had there been found *ten righteous* in Sodom, that city would not have been destroyed; and hence we may learn, that it is the *righteousness* of the *people*, that will gain the Almighty's favour towards the *kingdom*. Farewell, and may ye, my good friends, follow my advice to your own and your country's salvation! Ye will then, indeed, be patriots.

A plain and easy TABLE of Simple Interest, at Five Pounds per Cent. from Five Shillings to a Thousand Pounds; and, to avoid Fractions, it is fitted to the meanest Capacity, as near the Truth as possible.

If you would know the Interest of one Hundred Pounds for one Month, two Months, three Months, six Months, nine Months, or one Year, look for 100l. in the Side; and in the next Column, under 1 Month, is 8s. 4d. for 2 Months, 16s. 8d. for 3 Months, 25s. for 6 Months, 40s. for 9 Months, 50s. for a Year, &c. and so of the rest.

This is the Easiest Way by which Men should,
To Interest let their Silver and their Gold,
Yet worldly Misers, when to raking fall,
They wish their Interest get the Devil and all.

As I approve of the following Rules which have appeared in a learned Register for predicting CHANGES of the Weather by the BAROMETER, I know they will be acceptable to my Friends, and no unworthy Addition to our present laborious Performance.

“ **T**HE rising of the mercury presages, in general, fair weather, and its falling, foul weather, as rain, snow, high winds and storms.

“ 2d. In very hot weather, especially if the wind is south, the falling of the mercury foretels thunder.

“ 3d. In winter the rising presages frost, and in frosty weather, if it falls three or four divisions, there will follow a thaw; but if it rises in a continued frost, snow may be expected.

“ 4th. When foul weather happens soon after the falling of the mercury, expect but little of it; and the same infer, if fair weather succeeds shortly after its rise.

“ 5th. When the mercury continues to rise for two or three days before the foul weather is over, expect a continuance of fair weather to follow.

“ 6th. In fair weather, when the mercury falls much and low, and continues so for two or three days before the rain comes, then expect much wet, and probably high winds.

“ 7th. The mercury generally rises very fast after great storms of wind, when before it was very low. Dr. Halley mentions that he once observed it to rise an inch and 2 half in six hours, after a long continued storm of south-west wind.

“ 8th, The unsettled motion of the mercury indicates uncertain or changeable weather.

“ The words on the plate are not strictly to be adhered to, though they will in general agree, for the height of the mercury does not so much indicate the weather as its motion up and down; to know therefore whether the mercury is actually rising or falling, observe,

“ 1st. If the surface of the mercury is convex, (standing high in the middle) it is then rising.

“ 2d.

" 2d. If the surface is concave (standing low in the middle) it is then falling.

" 3d. If the surface is plain, or a little convex, it may be considered as stationary.

" 4th. A small shake of the tube will sometimes bring the mercury to its approaching height.

" The foregoing rules are chiefly to be depended upon; but the following are not unworthy of regard,

" 1st. The greatest heights of the mercury are on easterly and north-easterly winds, and its lowest station on southerly or westerly winds.

" 2d. A continuance of fair weather, the wind being in the north, and the mercury high or rising, is never succeeded by rain till the wind changes southerly.

" 3d. A continuance of rain from the south is scarce ever succeeded by settled fair weather, before the wind changes either to the west or some point of the north.

" 4th. If the mercury falls when the wind is full south, it scarcely ever fails to be a sign of rain.

" 5th. If it is going to be cold, frosty, or foggy, it rises pretty high; but if going to be windy or tempestuous it will then sink very low, and as soon as the first storm is over rise again apace.

" The barometer never fails to shew the true cause of the alterations of the weather, and we are thereby prepared to expect them; but it may sometimes happen, that the column of mercury will not alter its altitude agreeably to the foregoing rules, for when the atmosphere is charged with more watery matter than it can dissolve (the atmosphere is known to be a dissolvent medium) the surplus will form clouds, and those produce showers of rain when the mercury stands very high; and for the contrary reason, there may be sometimes no rain when the mercury is very low. Hence it follows, that we are generally satisfied by the barometer what weather we may at all times probably expect, though sometimes the contrary may happen, and a general monitor (to any wise man) is better than none at all.

Terms and Returns.

7

A TABLE of Terms and Returns for the Year of our Lord 1791.

Hilary Term begins January 24, ends February 12.

Returns or Edough Days.	Exc.	Ret.	Ap.	W. D.
In eight Days of St. Hilary Jan. 20	21	22	24	Monday
From the Day of St. Hilary in 15 Days 27	28	29	31	Monday
On the Mor. of the Purif. of B. V. M. Feb. 3	4	5	7	Monday
In eight Days of the Purif. of B. V. M. 9	10	11	12	Saturday

Easter Term begins May 11, ends June 6.

From the Day of Easter in 15 Days May 8	9	10	11	Wednesd
From the Day of Easter in 3 Weeks 15	16	17	18	Wednesd
From the Day of Easter in 1 Month 22	23	24	25	Wednesd
From the Day of Easter in 5 Weeks 29	30	31	1	Wednesd
On the Morrow of Ascension Day June 3	4	5	6	Monday

Trinity Term begins June 24, ends July 13.

On the Morrow of the Holy Trinity June 20	21	22	24	Friday
In eight Days of the Holy Trinity 26	27	28	29	Wednesd
From the Day of the H. Tr. in 15 D. July 3	4	5	6	Wednesd
From the Day of the H. Tr. in 3 W. 10	11	12	13	Wednesd

Michaelmas Term begins Nov. 7, ends Nov. 28.

On the Morrow of All Souls - Nov. 3	4	5	7	Monday
On the Morrow of St. Martin - - 12	14	15	16	Wednesd.
In eight Days of St. Martin - - 18	19	21	22	Tuesday
From the Day of St. Martin in 15 Days 24	25	26	28	Monday

N. B. No Sittings in Westminster-Hall on Ascension-day, Midsummer-day, and the Second of February.

The Exchequer opens eight days before any Term begins, except Trinity, before which it opens but four Days.

Note, The first and last Days of every Term, are the first and last Days of Appearance.

COMMON NOTES, for the Year 1791.

8 JANUARY hath XXXI Days.

Come forth, O man, yon azure lamps survey,
And view those lights which yield eternal day;
Bring forth thy glasses, clear thy wond'ring eyes,
See millions on other millions rise;
Then can'st thou think, poor worm! these orbs of light,
Were only made to twinkle to thy sight.

Monthly Observations.

Hoc anno sidera sideribus oppositi sunt.
Ninety-one's begun, and stormy does appear,

New moon 4th day, at 3 night

Both in the air and actions of the year;
The two superiors are in opposition,
Fall where they will, it is no good position.

Certainly the celestial aspects of this opening year, shew signs of distracted councils, of tumults, and of wars, not only at a distance, but in Europe. Neither does that peace, which all should wish, seem

First quarter 12th day, at 6 morn.

to wait this country; but whether hostility shall be at this time carrying on, or whether the storm shall seem to be blown over, such things are hatching, that unless the most prudent and peaceful counsellors prevail, from the starry influence nothing seems to likely as war and general slaughter

Full moon 20th day, at 6 morn.

ter among many nations of the earth.—
Happy will it be for those countries who escape such a desolating misfortune; and if, contrary to appearances, it should be our happy lot to be among them, the reform of our general manners, and the

Last quarter 27th day, at 7 mor.

amendment of our particular lives, will best express our gratitude to the ALMIGHTY FATHER of the Prince of Peace.

10 FEBRUARY hath XXVIII Days.

Pretumptuous mortal! can thy eyes delcry,
How far from each they roll, from thee how high?
Correct thy awkward pride, be wise and know,
Those glitt'ring specks thou scarce discern't below,
Are founts of day, stupendous orbs of light,
Thus by their distance lessened to thy sight.

Monthly Observations.

Homo sum, humani nihil a me alienum puto.

New moon 3d day, at 6 morn.

I am a man, and nothing relative to man is indifferent to me.

A Heathen and an African of ancient days uttered this truly christian sentiment. One would think he saw with a prophetic spirit the present unhappy and degraded state of his descendants, the poor negroes,

First quarter 11th day, at 4 morn.

and to awaken us to that just sense of our duty to each other, which he had, that he left us this excellent proverb: For since the discovery of the West Indies, how have we treated his unfortunate countrymen? Labour, hunger, and stripes, only have been their portion and inheritance.

Full moon 18th day, at 3 night.

Many great and humane parliament-men are, however, now devising means for bettering their lot. To this end let us hope none will refuse their mite. It is not more a Briton's duty than his interest to put an end to the traffic of men. At Tyre, we read in Ezekiel, that Javan, Tubal, and

Last quarter 25th day, at 3 after.

Methach, traded the persons of men; but then the Prophet says (chap. xxviii. v. 18) For the iniquity of its traffic, a fire from the midst of it shall devour it, and bring Tyre to ashes upon the earth. Let Europe tremble!

Venus is occidental and an evening star from the beginning of the year, to the 19th of October, then she becomes oriental and a morning star to the year's end.

Conceive each star, thou seest another sun,
In bulk, in form, in substance, like thine own.
Consult with reason, reason will reply,
Each lucid point which glows in yonder sky,
Informs a system, in its boundless space,
And fills with glory its appointed place.

Monthly Observations.

Cui fidas vide.

Look before you leap.

New moon 4th day, at 8 night.

This advice I would give to every old man who would marry a very young girl. A horned head is oftentimes the lot of a youthful husband; how then can the old ones always hope to escape; for as a friend of mine said, *if these things happen where the wood is green, what can be expected where it is dry.* Let the thought, how-

First quarter 12th day, at midn.

ever, make no man jealous; for a suspicious husband is a miserable being to himself and others, and very frequently his suspicion is the thief cause of that disgrace which he is so much afraid of. Be liberal to your wives, and they will be grateful and honest to you; and do not act like the

Full moon 20th day, at 7 morn.

suspecting Jews, who had a law concerning jealousy, and who argued the point with such nicety, that the exact number of minutes this law allowed a married lady to

Last quarter 26th day, at 11 night

spend with a gentleman, before her husband had a right to suspect her, was (would you believe it?) *only just so long as it takes to boil an egg and to swallow it.*

With beams unborrowed brightens other skies,
 And worlds to thee unknown with heat and life supplies.
 Observe how regular the planets run,
 In stated times their courses round the sun;
 Different their bulks, their courses, their career,
 And different much the compass of their year.

Amare & sapere vix Deo concedit.
 God seldom allows us to be in love, and to
 be wise at the same time.
 New moon 3^d day, at 1 aftern.

When Damon dies for Silvia, or what is
 worse, lives in misery, who shall say what
 foolish things he would not do at her com-
 mand. Jumping over the Moon is then
 but a trifling feat for him. In his love
 phrensy, he threatens the hemisphere that
 he will pluck down its stars, and with
 them bedeck the hair of his Goddess.
 There is, however, no remedy for him;
 First quarter 11th day, at 3 aftern.

no infallible medicine has yet been dis-
 covered for this disorder, except marriage;
 and then, it is said, in a few weeks or less
 time, many persons have found it a very
 curable complaint. But as this, and more
 particularly the next month, are most ce-
 lebrated for maidens first falling into love,

Full Moon 18th day, at 5 aftern.

it behoves me to caution them on the sub-
 ject of this delightful passion. Let them
 fix their affections rightly, and they will
 be happy. If a youth is sensible, honest,
 and industrious, they have a fair prospect
 of bliss; if he is otherwise, of misery.
 In making your choice, then, regard the
 Poet, who said,

Last quarter 25th day, at 8 mor.

Were you, ye fair, but cautious whom
 ye trust,
 Did you but know how seldom fools are just,
 So many of your sex would not in vain,
 Of broken vows and faithless men complain,
 For, of all the various wretches love has
 made,

But few have been by men of sense betray'd.

Yet all the same eternal laws obey,
While God's unerring finger points their way;
First *Mercury*, amidst full tides of light,
Rolls next the Sun, thro' his small circle bright,
All that dwells here, must be refin'd and pure,
Bodies like ours such ardour can't endure.

22 AUGUST hath XXXI Days.

Nor nearer does he wind, nor farther stray,
But finds the points whence first he roll'd away.
More yet remote from day's all chearing source,
Large *Jupiter* performs his constant course;
Four friendly *Moons*, with borrow'd lustre rise,
Bestow their beams benign, and light his skies.

Monthly Observations.

Mulier quæ multis nubet, multis non placet.
She who marries many, wont please many.

It has been observed of late, that in this month widows are very much inclined to marry again---indeed we believe they are so disposed in every month; for as a grave

First quarter 7th day, at 5 morn.

Bishop said to his daughter, who had married many, and declared she loved all her husbands, that she must *abound in love*.---
So all other widows do, and therefore the

Full-moon 13th day, at 11 night

adage of the Latin author given above, may not be so universally true in these days as it was in his; or indeed in those of the great Lord Bacon, of England, who discoursing of wives and widows, tells the following pleasant astrological story:---A wife in bed with her husband, pretended

Last quarter 21st day, at 5 aftern.

to be ill at ease, and desired to lie on her husband's side. The good man to please her, passed over her, not, however, without being somewhat detained in the transit. She had not lain long before she wished to lie in her old place again; and urging her husband to repairs the road he

New moon 29th day, at 1 aftern.

came. *I had rather*, said he to her, *go a mile and a half about.*

24 SEPTEMBER hath XXX Days.

Farthest and last scarce warmed by Phoebus' ray,
Thro' his wide orbit *Saturn* wheels his way.
How great the change could we be wasted there,
How slow the seasons, and how long the year;
One *Moon* on us reflects its chearful light,
There five attendants brighten up the night.

of the wicked; but through the great mercy of the Lord, pardon and forgiveness are granted to the sincere penitent. Many, therefore, we hope of the worst offenders are saved. It is, however, a melancholy reflection, that we have so many culprits

New moon 27th day, at 10 foren.

in this county, and that a man cannot enjoy the fruits of his own vineyard, orchard, and garden, or preserve his other property, or even his life, from nightly depredators and savage murderers.

28 NOVEMBER hath XXX Days.

'Tis heat intente to what can there be known,
Warmer our poles than is its burning zone.
Who there inhabits must have other pow'rs,
Juices and veins, and sense, and life than ours;
One moment's cold, like theirs, would pierce the bone,
Freeze the heart's blood, and turn us all to stone.

Monthly Observations.

First quarter 2d day, at 1 aftern.

Fugit irreparabile tempus.

Time and tide stay for no man.

Another year is now closing ; an annus mirabilis, productive of great events, and which has laid the foundation of others equally great and important, the issue of

Full moon 10th day, at 2 aftern.

which time will unfold. Inasmuch as they may affect us, I foresee no aspects but what are favourable, though great changes in the mundane system may be predicted. Unseen causes are ever at work producing unexpected events. Therefore amidst the

Last quarter 18th day, at 2 after.

changes and casualties of this variable and mortal world, let us preserve that peace of mind which arises from conscientiously doing our duty, and then we may say with the assaulted christian Hero, "I fear God,

New moon 25th day, at 7 morn

and have no other fear." And now I shall conclude my observations, wishing a long life, long health, a loyal people and prosperous reign to his Sacred Majesty KING GEORGE, whom God long preserve.—AMEN.

The Dominion of the Moon in Man's Body.
 Passing under the Twelve Zodical

Astrological Observations for the Year 1791.

* *Seek him that maketh the seven Stars and Orion, &c.*

AMOS v. 8.

Who maketh Arcturus, Orion, and Pleiades, and the Chambers of the South; who doeth great things past finding out, and wonders without number.

JOB. ix. 9. 10.

Can'st thou find the sweet influence of Pleiades? or loose the bonds of Orion?

JOB. Chap. xxxviii. v. 31.

They fought from Heaven, the Stars in their courses fought against Sifera.

JUDG. v. 20.

IN many of my former observations, I have shewn the truth and validity of christian astrology, as it is studied and practised by the diligent searcher into the wonderful works of God in nature: But, if notwithstanding what I have adduced from the authority of Holy Scriptures, and the testimonies of men of learning and sound judgment, some should carp at it as idle and heathenish, we must conclude that their ignorance makes them bark at that lustre which they are not able to behold, and endeavour to ridicule an art, because they themselves cannot understand it. Had Campanella lived in our time, he might perhaps have escaped imprisonment and punishment, but not the reflections of malice and ignorance; therefore Naudæus's expressions is not wholly unsuitable now, *Adeo infelix est Bruditiis, scire quod multi nesciunt periculosa, etiam intelligere quod omnes ignorant.*

If the enemies to the science of astrology, would but impartially weigh the several Scripture quotations above, and others that may be made (plainly acknowledging an influence of the stars) they would not condemn the study as improper, nor would they deem it unchristian, because it has been principally practised by idolatrous nations, who

certainly have made the science ridiculous, by applying it to every thing. For can it be supposed by consulting the stars every night, I can know the luckiest moment for getting out of my bed the next morning; but then to condemn all astrology entirely, because some pervert it, would be like condemning the Christian religion because there are men (like Mahomet and others) who have invented a sensual, fantastic will-worship of their own upon the grounds of it.

If, moreover, when God, in his great wisdom and power, created all things good, and placed the stars in their respective orbs or spheres, the Planets called *Lights in the Firmament* (Gen. i. 14.) *for signs and for seasons, for days and years*, is it not a contradiction to the inspired penman, to assert that it is unlawful for man to consider these *signs*, when God has endued him with an ability capable to observe them and their harmony, with the other parts of the creation. What if there be, as I have before remarked, many ignorant pretenders? So there is to all arts, and yet the arts themselves are nevertheless valid and useful.

We see in the Microcosm, or little World, that is the Body of Man, with what harmony all parts perform their distinct services; how they assist each other, and support the whole frame; and if any (though the least) member receive hurt, whereby it is unable to do its service, or obstructed in the due and regular performance thereof, all parts are sensible of it, sympathise with it, and share in the disorders wherewith it affects the whole body. The like wonderful order and harmony is also in the Macrocosm or great World, in the motions of the planets, and their divers aspects, and their influence affects the constitution of the air, and occasions its frequent vicissitudes. The fertility of the heavens gives life, spirit and production, and influences all things under their convexity (the terrestrial globe not excepted) producing the growth and increase of vegetables, minerals, and animals; and in the body of man, our several temperaments and natural inclinations, and should one planet fall out of its course, all nature would be disturbed. Instructive is our search into these things, it being a great means of drawing our minds up to their great Creator, their primary cause, by whom they exist and move, who doeth great things past finding out, and wonders without number. How can we behold the beauty and curious order of the creation, and not admire, love and adore the Almighty Author?

thor? Or can we consider that providential and powerful hand, that preserves all things in that beautiful system wherein they were first placed, and not acknowledge our own imbecility and nothingness, and the great and unlimited power of the Creator. *Quum respicio celos tuos, opus digitorum tuorum; Lunam & Stellam quas statuisti; quid est mortalis, quod memor sis ejus? Aut filius hominis quod visites eum?*

When I consider the heavens (saith David) the works of thy fingers; the moon and the stars which thou hast ordained, what is man, that thou art mindful of him? and the son of man, that thou regardest him. Psal. viii. 3, 4.

What insignificant creatures, indeed, are we in the immensity of God's works. Innumerable sets of planets are moving round us and their respective suns, other heavens and other suns are rising above these, which are still enlightened by superior firmaments of luminaries. Were our sun, the earth, and all the lights we can see in the heavens, extinguished and destroyed, it would occasion no perceptible chasm in the immensity of creation, and be missed no more than a grain of sand upon the shore. Worlds never seen from earth before, are daily burling upon our sight, in the newly-discovered twinkling stars; and it is the opinion of the learned Huygenius, that there are stars whose light (and light moves at a rate little less than 200,000 miles in a second of time) has not yet travelled down to us since their first creation. How little worthy of regard then must man think himself amidst such vast worlds and immeasurable space; and yet we have the comfort to know, that our beneficent maker does not, in the multiplicity of his works, overlook the meanest of his creatures; but as the great and good father of all, knowing all things, seeing all things, and being present every where—

“He views with equal eye, as God of all,
“A hero perish, or a sparrow fall;
“Atoms or systems into ruins hurl'd,
“And now a bubble burst, and now a world.”

Of the WINTER QUARTER.

Which begins at such time as the sun touches the first scruple of ♋ and passes through ♋ and ♎, it happens on Tuesday, December 21, near two in the afternoon, 1790,
at

at which time 26 degrees of φ culminates, and 27 deg. of γ ascends the Eastern horizon, and δ in the 9th, the \odot , η and ξ in the 8th, and ι and ζ are nearly in opposition from the 12th and 6th houles. The moon in 25 deg. of φ being void of course, and thus are the planets posited at this ingress. The aspects near this time are the squares of the sun to ι and ζ , but the most prevalent aspect is the approaching opposition of the two superiors, near the middle of January, which will principally sway the actions of this quarter, and perhaps the whole year; for this aspect happens in the beginning of the two equinoctial signs φ and ψ , which has a great influence upon all human affairs, from which may be gathered, that many animosities will arise this quarter, and one sort of people seem to be afraid of the other. The Devil is busy, and his disciples many: Evil minds are hard at work to obtain their ends, but Providence still watches for the honest and the true of heart, and over them the spirits of hell do not prevail. Some important news may be expected from abroad this quarter, and better prospects to our merchants and tradesmen in general; but in a certain country, the clergy will be reviled, and their power shaken. As to the diseases of this quarter, you may know them without repairing to the sixth house; and they are those of the lungs, bowels, head, and reins; from the lungs, shortness of breath, coughs, althmas, with spitting of blood, and all generally from colds and weakness of those parts.

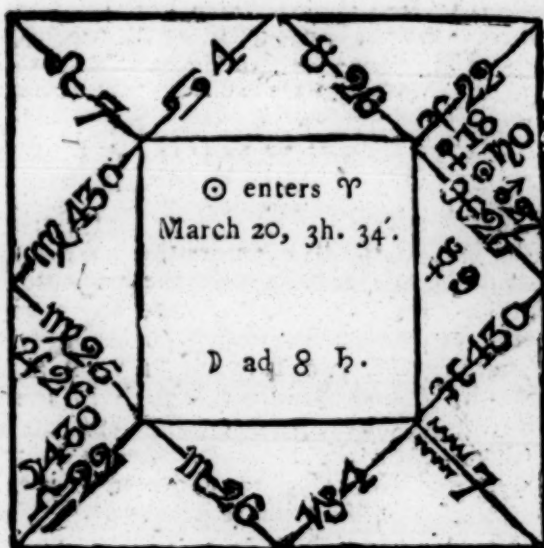

Winter, hoary Winter, now
 Frowns on all with low'ring brow;
 Howling winds that fiercely blow,
 Rattling hail and driving snow,
 Naked oaks and frozen plains
 Tell, that tyrant Winter reigns.

The SPRING QUARTER.

This quarter commences at such time as bright Phœbus mounts the first scruple of the equinoctial sign Aries, or the Earth Libra, which happens this year, on Sunday the 20th of March, at half past three in the afternoon, for which time the following scheme is erected:

Lat.

	Lat.	Plan.	
h	2	12	S.
u	1	35	N.
♂	0	52	S.
♀	0	45	S.
♂	2	14	S.
D	2	45	S.
	Declin.		
h	1	0	N.
u	2	50	N.
♂	1	43	S.
♀	5	32	N.
♂	10	26	S.
D	2	37	S.

Wherein 26 degrees of ♊ is on the medium cæli, and about 5 deg. of ♍ ascends the Eastern horizon, and the planets are posited as in the foregoing scheme, where you may see ♀, h, and the ☉ in the 8th house in ♍, and ♂ in the same, in the latter end of ♋, not far distant from the body of the ☉, ♀ in the 7th, and u in the 2d, the D in the same, going from his conjunction, and applying to the opposition of h; and thus stands the heavens at this time, They predict mighty preparations of contending nations to carry on destructive war; but we hope the peace-makers will prevail, and turn our swords into plough shares. The enemies of religion revile at, and our clergy are much abused; but Christianity is built on such a rock, that the gates of hell can never prevail against it.

The diseases of this quarter are the remnants of Winter maladies; but this is the season of delight, and as the Poet says, "Beware ye Virgins of the Month of May."

See lovely Spring, with renovating hand,
Her blooming empire o'er the world display;
Plenty she scatters thro' the smiling land,
And with new rapture wakes the genial day.

Heedful

Heedful no more of Winter's dreary reign,
 Of frozen slumbers, or deep drifted snow;
 The festive floods their wonted channels gain,
 Woods, plants and seeds, all vegetate and grow.

The SUMMER QUARTER,

Which enters at such time as that glorious monarch of the celestial orb, the Sun, enters the first point of Cancer, or the celestial crab, making now the longest day with us; and is this year on Tuesday, June 21, at 37 minutes past 1 afternoon, at which time 17 deg. of α ascends, and 22 deg. of ϖ culminates, and γ in the 11th, δ in the 10th, the \odot in the 9th, ϵ and ζ in the 8th, η in the 6th and the 5th; and thus stands the position of the heavens at this time, Venus is ruler of the ascendant and posited in the 10th, shews the good state and prolificness of the common people; let them therefore be grateful for their share of the gifts of Providence. The Sun is posited in the 9th, and Venus governor of the ascendant, and in a mundane parallel to each other. This argues that Justice will rear her head, and Hypocrisy be discovered; for out of his own mouth a Hypocrite will be judged. The triumphing of the wicked is but short, and the joy of the Hypocrite but for a moment. And as the Sun is posited in the 9th, let the industrious merchant rejoice, it forbodes comfortable returns. On no occasion of business employ wits, plain dealing, in the way of trade, will be found the best and most profitable. The diseases that are like to happen this quarter, are such as proceed from over-eating of fruit, disorders in heated blood, pains in the ribs, plurisies, burning and pestilential fevers, yellow jaundice, &c.

Now Summer's come, the blossoms of the field,
 A plenteous honey to the bees do yield;
 The grass-full plains and golden meadows stand,
 Ripe for the scythe, and tempt the reapers hand,
 While rural swains and village maids repair,
 The labours of the scorching day to share;
 Each other now they aid with willing minds,
 And while stout COLLIN reaps, his MORSEY binds.

The AUTUMNAL QUARTER.

Now this quarter does commence at such time as heaven's bright charioteer comes to the first point of the celestial balance,

lance, or sign Libra, which is this year on Thursday, September the 22d, at 15 hours 15 minutes p. m. or vulgarly on Friday, at a quarter past 3 in the morning, at which time the very beginning of Virgo is on the horoscope, and 21 degrees of Taurus is on the mid-heaven. The planets are variously disposed at this ingress, and the transactions of the world will be as various: The Sovereigns that will soon be obliged by the severity of the weather, rather than by their own inclinations, to cease from war, will still be plotting in negociations; but little will they avail against the just, for *Reges subjacent regibus Stellarum* (i. e.) Kings are subject to the ruling of the stars. The diseases of this quarter are particularly felt by the devotees of Venus last summer, for oftentimes it is most true, that the sweetest meat has the fourest sauce: Let us therefore take warning.

And now from every teeming field,
Is brought the grain and purple vine;
At God's command they fall to yield
The strengthening bread and chearing wine:
So may the Almighty's providence
Bless Britain's fields with growing store,
Till Heaven's eternal Spring commence,
And earthly harvests rise no more.

Of the Eclipses this Year, 1791.

This Year will produce four Eclipses, two of each luminary; they will happen in the following order:

The first is a visible Eclipse of the Sun, on Sunday the 3d day of April, soon after twelve o'clock. The type and times as follow, by Mayer's Tables:

The Type for Grantham.

	Greenwich.			Grantham.			} App. Time.
	h.	m.	f.	h.	m.	f.	
Begins	0	18	52	0	14	17	
Middle	1	45	24	1	41	5	
End	3	6	56	3	3	29	
Digits	7°	18'	0"	7°	43'	0"	

v. the Sun's vertical point, c, the first contact.

The second Eclipse is of the Moon, on the 18th of April, near five o'clock in the afternoon, therefore invisible on these parts of the globe.

The third Eclipse is of the Sun, on the 27th of September, near midnight, consequently invisible on these parts of the globe.

The fourth and last Eclipse, is a partial and visible one of the Moon, on the 12th of October, in the morning. The type and times as follow, according to the Durham Tables:

Greenwich.			Grantham.			
h.	m.	s.	h.	m.	s.	
Begins	0	1 31	11	58	31	
Middle	1	35 51	1	32	51	
End	3	10 11	3	7	11	
Digits	9°	13' 0"	9°	13' 0"		

on the 11th at night.

} Ap. time

The TYPE.

v the Moon's vertical point, c the first contact.

JOSEPH BURROUGHS.

Sedgebrook, near Grantham, Lincolnshire.

Having now given you the Eclipses for the year, I shall make no further remark upon them, than tell you the notions the Indians have of an Eclipse: They think it is a contest between a good and an evil spirit; but as the light always comes again, and at last prevails over darkness, they rightly conclude the good spirit is most powerful.

Among

Among the remarkable occurrences of the year that is gone, are the deaths of great men; and we should not shew our respect to a brother cōtemporary almanack-maker, if we did not notice in our almanack, the departure at Philadelphia, on Saturday night, April 17, 1790, of Dr. Benjamin Franklin. He published an almanack in America, was the great cause of that country's separating from England, and is considered, in some measure, as the parent of the French Revolution; and under that conviction, the kingdom of France, as well as America, went in mourning for him. See then, my friends, what is to be accomplished in this world, by industriously employing our abilities; whilst thousands were squandering away their estates, and destroying their health in unlawful pleasures, or spending their time in foolishness; Dr. Franklin, by sobriety and industry, was rising from a low estate to the greatest eminence, and when he died, two nations mourned his loss. Let not then the poorest man despair, by industry and virtue every thing is to be acquired, by idleness and vice every thing is lost. Dr. Franklin was a great philosopher, and when in France he exposed the absurdities of the *Magical Doctors*, of whom you must have heard a great deal said, and who in the days of Popery (which we have very happily deprived of power in this kingdom) would have been burnt for witchcraft, though indeed there is no great craft in them. By steadily fixing their eyes on their patients, by pointing their fingers at them, by drawing their hands all about them (which is their mode) they may perhaps throw weak and nervous constitutions into fits, or as they call it, into a *crisis* or trance; but never can they (as they pretend) cure all complaints and disorders, and therefore I hope none of my friends will be so simple as to throw their money away upon them, or look for a medicine in their nonsensical fascinations.

I will now remind you, that in concluding my last year's work, I told you there would be in 1790, much noisy fighting doings at elections of Parliament men; you must have observed, I truly foretold some of those contests that have happened, even to the destruction of the lives of many. It were to be wished regulations were made to prevent such serious contentions that engender discord at home. For let us be at peace among ourselves, and like *Israel*, *we shall do valiantly*. United at home, however attacked, we shall be a match for the world in arms; and wishing this may be the case, that health and long life may attend our King, success

our

our fleets and armies, and a flourishing trade our merchants, and that the whole people may be happy and loyal, I take my leave of you till next year, my good friends. And

Let this be'er the star by which you steer,
Above yourselves, to make your country dear;
For still superior must those mortals prove,
Who's glory is their God, their king, and country's love;
And well united in the bonds of love and peace,
Our arms, our arts, our joys and fortunes will increase.

To the PUBLIC. As it is more than probable that other Almanacks will be printed and published this year, entitled, *Moore's Almanack*, all persons are hereby cautioned against the same, as they may depend upon it, they are false and counterfeit. For I, *Thomas Wright*, of *Eaton*, near *Melton-Mowbray*, *Leicestershire*, Grazier, Astronomer, Mathematician, and Professor of Astrology, have been for near the fourth of a century the only author of the true *Moore's Almanack*, which I have always compiled from the original copy and instructions, as they were transmitted and communicated to me by the late ingenious Mr. *Tycho Wing*, of *Pickworth*, in the County of *Rutland*, my quondam preceptor, who was the successor of Mr. *Moore*, and at Mr. *Wing's* decease the copy descended to me, and I have the originals in my study at this time. The right of printing and publishing the said *Moore's Almanack*, which I formerly vested in the Company of Stationers at *London*, I have now transferred to Mr. *THOMAS PEARSON*, Printer, Bookseller, and Stationer, in *Birmingham*. The purchasers of book almanacks are therefore thus publicly informed, that the said *Moore's Almanack*, published as aforesaid, is the only true one, and are cautioned against all others, as they must of consequence be counterfeit and spurious.

Eaton, near *Melton-Mowbray*, *Leicestershire*,
1790.

T. WRIGHT.

A Family Herbal, in One Volume, Octavo.

THE NEW FAMILY HERBAL, or DOMESTIC PHYSICIAN, being an Improvement upon Culpepper, and all former Herbalists and domestic Physicians, is now completed, and may be had of the Publisher (the Printer of this Almanack) or any other Bookseller, in fourteen Sixpenny Numbers, weekly; or neatly bound, for 8s. It is the most perfect book of its kind ever published, for the use of Families, both Rich and Poor.
